PRO ANALYTICS REVIEW

Aladdin Cleaning & Restoration

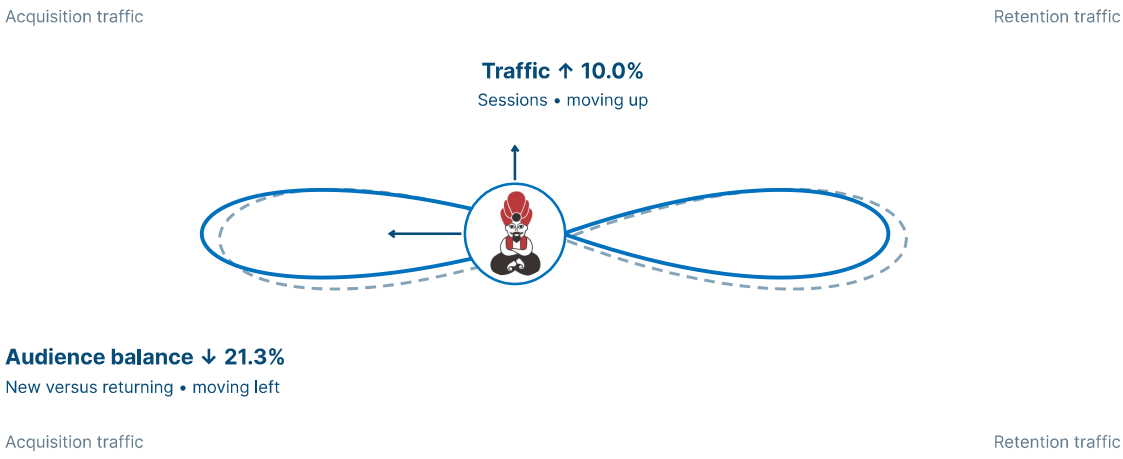

Brand movement. Clear priorities. Measurable action.

07/21/2026 – 10/18/2026 · Previous 04/22/2026 – 07/20/2026

01 / BRAND POSITION

Your Brand in the Matrix

The Brand is moving up and left toward acquisition. Goal delivery per session is weakening.

5.97 goal events per 100 sessions ↓ 21.9% · Previous 7.64

Current movement is relative to your previous results. The diagram does not measure competitors or market share.

TRAFFIC

Improve the content-to-goal handoff

THE PRIORITY

Turn more visits into goal events.

The Social Media Magnet loop for Aladdin Cleaning & Restoration shows growing traffic with new user gains, but a decline in returning user ratio and goal events per session, indicating weakening conversion efficiency. The priority handoff is converting increased visits into completed form and phone inquiries without losing narrative harmony. Retention through email requires a 2+2+2 process review to enhance returns. A dimensional messaging campaign leveraging the approved Strategy Canvas differentiation of local ownership and broad service offerings is needed to deepen audience engagement and lift the goal funnel rate.

Brand foundations in this Review

Strategy Canvas

Aladdin-Cleaning-Restoration-Strategy-Report-Insights-and-Actions-10-8-2026.pdf · Uploaded 10/19/2026 3:12 PM Central Time · Version e209e9ea1967

Document reference

Pages 1-2, Executive Summary and Approved Ratings; Pages 27-29, Priority Recommendations and 90-220 Day Action Plan

Connection to performance

The document confirms Aladdin's local ownership, broad service offerings, trust-based customer focus, and care assessment as the central campaign lead aligned with measured Brand hub content and gaps in conversion.

Move to Make

Create a coordinated messaging campaign around the Aladdin Care Assessment as the main offer, reinforcing trust and local expert promise with clear next steps and linked content; sequence messages to build awareness, understanding, and conversion.

02 / MESSAGE MATRIX

Give the campaign dimension

Audience × content focus × channel. Carry one Brand narrative through a related sequence in the publishing calendar.

DEVELOP

Specialty rug care practical advice as a complete useful answer

CONTENT SIGNALS

- No specific post is cited. This is a new content test, not a measured winning topic.

AUDIENCE

Homeowners and property managers needing effective rug care guidance (proposed audience for this test; reader identity is not established by post views).

BRAND CONNECTION

Reinforce Aladdin's trusted local expert promise and service breadth

ACROSS THE CHANNELS

Website/blog for in-depth content; Facebook/Instagram for hooks; Email for returning audience invitations

PUBLISHING CALENDAR FOCUS

Customer question on rug care → detailed blog article → social hook posts → related follow-up content

MEASURE

Measure blog visits tagged to this article, social reach of hooks, and goal completions following visits.

REFRAME

Commercial cleaning service claims with customer-centric proofs and eligibility details

CONTENT SIGNALS

- No specific post is cited. This is a new content test, not a measured winning topic.

AUDIENCE

Facility managers and commercial property teams (proposed audience for this test; reader identity is not established by post views).

BRAND CONNECTION

Shift from product focus to clarity, benefits, and trust reflecting local accountability

ACROSS THE CHANNELS

Compare within channel content; adapt social hooks to customer questions, clarify conditions on website

PUBLISHING CALENDAR FOCUS

Identify lower-view commercial posts → revise hook to address benefits and eligibility → publish follow-up post

MEASURE

Compare revised post visibility, engagement, then tagged visits and goal events.

CREATE

Aladdin Care Assessment campaign linked to the approved Strategy Canvas differentiation and offer

CONTENT SIGNALS

- No specific post is cited. This is a new content test, not a measured winning topic.

AUDIENCE

Homeowners and property managers confirming cleaning or restoration needs (proposed audience for this test; reader identity is not established by post views).

BRAND CONNECTION

Highlight local ownership, breadth of expertise, trust, and actionable guidance

ACROSS THE CHANNELS

Discovery via social, explanation and conversion via hub content, and return via email

PUBLISHING CALENDAR FOCUS

Introduce assessment concept → detailed assessment offer pages → social reminders → email follow-ups

MEASURE

Measure tagged visits to assessment pages, social reach, email clicks, and goal events tied to assessment offers.

> Post rankings show lifetime visibility, not a content-quality or engagement score. Compare publication age, format and exposure before dropping a topic. Reactions, comments, shares and saves are not supplied in this review. The existing Message Matrix and publishing calendar have not been assessed; the sequence above is recommended direction.

03 / ACTION PRIORITIES

The Moves to Make Next

Make one clear change. Track its result. Keep what improves the Brand's movement.

01

Within 7 days.

Improve content to goal handoff

WHERE

> Website top entry and contact pathways

WHY THIS MATTERS

Goal events per 100 sessions changed -21.9%. Form events changed -20.4% while phone events changed -6.7%. Validate measurement and test the message-to-action handoff; this alone does not establish a broken form.

MAKE THIS CHANGE

- Select one current social or email hook, follow it through hub content to form or phone call step, ensuring narrative consistency and a clear, single next action; validate event tracking before interpretation.

MEASURE THE RESULT

- Monitor goal events per 100 sessions separately for forms and phones; verify event triggering.

SMM basis · Goal funnel · close the loop at the hub

02

Within 14 to 30 days.

Enhance email return rate via 2+2+2

WHERE

> Email campaign creative and routing to Brand hub

WHY THIS MATTERS

Returning-user count changed -6.7%; the returning-to-new balance changed -21.3%. Test the return path to the hub. Email clicks and returning visits are separate measures; their movement does not establish that the email creative failed.

MAKE THIS CHANGE

- Test email sender recognition, concise subjects, and conversational body text linking to prioritized hub content without logos or headers; inspect before judging compliance.

MEASURE THE RESULT

- Track email click-throughs, tagged return website visits, and converted goal events.

SMM basis · Retention · email brings the audience back

03

Within 14 days.

Align top traffic source message with landing page

WHERE

> Organic Google entry pages and website homepage content

WHY THIS MATTERS

A consistent narrative should continue from the discovery source into the Brand hub. The supplied sample supports a message-alignment test; it does not prove a mismatch or identify search intent.

MAKE THIS CHANGE

- Compare and align entry messaging from Google landing pages with website headline, service area focus, proof points, and clear calls to action; test one change maintaining comparison window.

MEASURE THE RESULT

- Measure sessions and goal events attributed to Google organic source.

SMM basis · Brand hub · narrative and message harmony

04

Within 14 to 30 days.

Test dimensional messaging campaign

WHERE

> Message Matrix and publishing calendar

WHY THIS MATTERS

A consistent narrative should continue from the discovery source into the Brand hub. The supplied sample supports a message-alignment test; it does not prove a mismatch or identify search intent.

MAKE THIS CHANGE

- Map one audience vertical to a topic bucket with distinct channel roles (Facebook, Instagram, blog hub, email).
- Develop related serialized sequence with follow-up topics, reframing weaker hooks where needed.

MEASURE THE RESULT

- Review like-age post visibility, engagement, tagged returns, and leads over comparable periods.

SMM basis · Message rhythm · harmony and serialization

05

Within 14 days.

Test social spoke hook with hub visits and goals

WHERE

> Selected social platform content and linked hub articles

WHY THIS MATTERS

Social referral visits up in some platforms but low overall; quality and conversion unverified.

MAKE THIS CHANGE

- Choose one promising social topic, link to matching hub content with proper tagging and measure funnel progression to goals separately.

MEASURE THE RESULT

- Track social platform views/follower counts alongside tagged social website sessions and attributed goal events.

SMM basis · Acquisition spokes · attention into website visits

Brand hub · narrative and message harmony

Results

The supplied website language and Brand promise emphasize local ownership, broad expert service, trust, and a specific customer promise around restoration and cleaning for San Antonio area customers. However, destination content for many social hooks is unverified, so narrative alignment with social is partly unverified.

What it means

Narrative on the website supports local trust, expertise, and broad offerings, aligned with the approved Strategy Canvas position, but social message-to-destination consistency cannot be fully confirmed from supplied data.

Recommended action

Check actual social posts and email links for consistent story, service promise, and local trust language matching the website.

How to measure

Sample tagged visits from social/posts and email link clicks with content narrative review and goal completions by source.

SMM basis · Story, promise, beliefs and trust center the Brand. The website/blog is the content hub. A social message and its destination should reinforce the same narrative.

Content leadership · a reason to enter the hub

Results

Sample blog post topics address specialty rug care, restoration, cleaning questions, and interior design themes aligned with Brand priorities. Top post excerpt visibility indicates potential relevance but no blog engagement or journey metrics are available to confirm usefulness.

What it means

Content topics align with Brand differentiation and customer needs but lack usage data to verify audience answer effectiveness or onward engagement.

Recommended action

Test a hub article answering a concrete customer question with an explicit social hook and direct form/phone next step.

How to measure

Tagged article sessions, goal events following the article visit, and comparative repeat visit rates.

SMM basis · Useful original and curated content attracts an audience through relevance, not repeated sales claims. Social hooks should invite readers to continue on a specific blog or resource permalink at the hub. SMM blog paths are /blog/.

Acquisition spokes · attention into website visits

Results

Facebook · organic website sessions: 60 versus 27. Instagram website sessions: 7 versus 0. Facebook · paid website sessions: 1 versus 0. Platform views and attributed website sessions have different measurement bases.

What it means

Platform visibility and website referrals are different results. Test whether a selected social hook brings useful visits into matching hub content and then a goal; do not attribute the overall goal decline to social without that link.

Recommended action

Test one promising social topic with tracked destination blog article and link that to the properly tagged goal funnel step.

How to measure

Tagged social-driven website sessions and then goal events attributed to these visits.

SMM basis · Social channels acquire readers and followers and draw them through relevant links into the hub. Followers provide an audience for future messages; platform attention alone is not the final business result.

Retention spoke · email brings the audience back

Results

Returning users: 456 versus 489 (-6.7%). New users: 4,019 versus 3,393 (18.4%). Returning-to-new ratio change: -21.3%; this is a different measure from returning-user count change. Email sends: 40,318 versus 26,231; opens: 18,088 versus 12,521; clicks: 370 versus 247; open rate: 44.86% versus 47.73%; click rate: 0.92% versus 0.94%. Campaign response totals are lifetime cumulative responses. Email creative and campaign-to-website attribution are not supplied.

What it means

Email clicks increased. Click rate did not improve. Read that result separately from returning-user movement. Test whether email links bring readers back to useful hub content and onward to a goal before attributing a return-visit problem to the email creative.

Recommended action

Test activating 2+2+2 in emails with short, clear, personable copy from a recognizable sender linking to prioritized hub content.

How to measure

Email click-throughs, tagged return visits, and subsequent goal events in website analytics.

SMM basis · Email nurtures a relationship and returns readers to useful content at the hub. The 2+2+2 approach gives two seconds each to recognize the sender, understand the subject, and scan the body for a reason to click. Use a recognizable person plus company, conversational text, no logo/header image, and relevant links.

Message rhythm · harmony and serialization

Results

Available blog post excerpts reveal repeated themes in specialty rug care and restoration-related posts timely spaced in October 2026. No publishing calendar supplied; repeated topic pulse and serialization unconfirmed.

What it means

Content topics support thematic consistency but formal serialization in publishing rhythm and sequencing is unverified.

Recommended action

Develop a serialized sequence on one key topic aligned with Brand promise, with channel-specific versions connected to the hub.

How to measure

Publishing dates and topic follow-up visit trends against returning user and tagged goal metrics.

SMM basis · Repeated, related topics build an identifiable message pulse. Harmony keeps one narrative across channels; serialization develops useful topics over successive messages. The Message Matrix joins audience verticals, topic buckets and channels.

Goal funnel · close the loop at the hub

Results

Sessions changed 10.0%; completed form and phone events changed -14.1%. Goal events per 100 sessions: 5.97 (previous 7.64). Form-event change: -20.4%; phone-event change: -6.7%. These are event counts, not unique leads.

What it means

Goal events are not keeping pace with sessions, showing a weakening conversion from visit to enquiry.

Recommended action

Prioritize inspecting and simplifying the next action from content to form/phone goal with clear calls to action; verify event tracking and test a clearer single-step next action.

How to measure

Goal events per 100 sessions separately for forms and calls before and after adjustments.

SMM basis · The path is attention to website visit to a designated goal, then relationship and retention. Content and links should move a reader through that path. Measure each available step and improve the weak handoff.

Infinity loop · acquisition and retention balance

Results

Sessions: 10.0% (up/down). Returning-to-new ratio: -21.3% (left/right). Returning-user count: -6.7%. Goal events per 100 sessions: 5.97 versus 7.64 (-21.9%).

What it means

The magnet shows stronger acquisition but weaker retention and goal delivery efficiency, risking a disconnect in the Infinity Loop.

Recommended action

Design return drivers such as email, referral, or follow-up content to rebalance retention with acquisition; track if improvements lift both returning user ratio and goal conversion.

How to measure

Sessions, retention ratio, and goal efficiency compared over successive windows.

SMM basis · The model represents movement toward or away from the Brand and the balance between acquiring and retaining an audience. A stronger magnet combines attraction, return visits and goal delivery.

THE EXPERIENCE BEHIND THE FRAMEWORK

About Social Media Magnet

J. Elliott Cunningham is a marketing and Brand strategy consultant, author, and creator of The Social Media Magnet. His work brings together business strategy, Brand positioning, content direction, and practical marketing execution.

The Social Media Magnet strategy has been deployed with live companies and has a proven track record in practice. More than 1,000 participants have gone through the program. Pro Analytics carries that experience into a continuing business tool—helping teams measure results, interpret movement, and decide what to improve next.
